Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in this application.

Listing of Claims:

1. (Currently amended) A dental crown formed of a thermoplastic polymer material, said crown having being configured as a continuous structure of a natural appearance of a vital tooth and comprising

a tooth shaped top surface and

depending flexible side surfaces extending continuously around edges of said tooth shaped top surface and extending continuously from a tooth shaped top surface end of the dental crown to an end opposite said tooth shaped top surface end of the dental crown, at least a part of the depending side surfaces having an inwardly directed bottom portion.

- 2. (Original) A dental crown according to claim 1, wherein said thermoplastic polymer material comprising a polymer selected from polyacetal, polyacrylate, polymethylmethacrylate (PMMA), polyamide, polyaryletherketone (PAEK), polyetherketone (PEK), polyetheretherketone (PEK), polyetherimide (PEI), polyethersulfone (PES), polysulfone (PSU), and mixtures thereof.
- 3. (Previously presented) A dental crown according to claim 2, wherein said polymer is a homoor co-polymer of acetal resin, polyetheretherketone (PEEK) or polymethylmethacrylate (PMMA).
- 4. (Original) A dental crown according to claim 1, wherein said thermoplastic polymer material further comprising at least one of the following: fibers, fillers, pigments and reinforcements.
- 5. (Original) A dental crown according to claim 1, formed by injection molding.
- 6. (Previously presented) A dental crown according to claim 5, produced by a mass production injection molding method, said mass production injection molding method comprising:

Appl. No. 10/685,803 Reply to final Office Action of July 26, 2005 Attorney Docket No. 25771X

providing a multi-element mold; and

employing the multi-element mold to injection mold a dental crown from a thermoplastic polymer material.

- 7. (Original) A dental crown according to claim 6, wherein said multi-element mold includes an ejector, which is being operated to eject the molded crown following opening the multi-element mold.
- 8. (Original) A dental crown according to claim 1, formed by compression molding.
- 9. (Original) A dental crown according to claim 1, formed by machining.
